Foreword

FROM THE AUTHOR

I remember that twenty years ago I came across and read a very interesting book entitled “Substance and Shadow” written by the late Vedic scholar Suhotra Swami.

The book is the illustration of the Vedic approach to knowledge. The book is divided into chapters describing the philosophical, psychological and practical way a sensible person should live his life. The teachings of ancient India’s famous epics of Ramayana and Mahabharata were also included in the book; almost any reader could understand the essence of this invaluable inheritance.

The game of chess also has the origin in the Vedic space and epoch. The Mahabharata asserts that the game called “chaturanga” (which in Sanskrit means “having four limbs”), was a war-simulation game that inspired the big Kshatriyas (the caste of the warriors) to choose the military strategy of that ancient epoch.

I would be very happy if the book you are holding now would be the “substance and shadow” for many active players and coaches; they may use it in the process of improving their own chess skills or those of the students whom they are teaching this exceptional game!

I would like to explain the way in which one should try to approach this book for better understanding of the aspects I previously talked about.

The sidelines or rare variations the book deals with, are being played at top level mostly by following categories of players:

1. Within the first category we can identify even some top 10 players in the world, but also many renowned super GMs. The reasons they sometimes employ these lines are purely psychological, as they want to avoid the opponent’s home preparation, and grab the surprise – factor advantage from the very beginning of the game.
2. The second category includes the young rising stars, who are very self confident and also eager to experience new positions and get some extra adrenaline. They experience both psychological and philosophical aspects of these rare lines, searching for lots of practical positions to be solved over the board.
3. Finally, the third category is the one this book is mainly dedicated to. They are the Najdorf players, to whom I present a wide range of practical ways of refuting those lines in order to have an easy game as Black.

Do not forget that you are the “substance” of this book, while the first two categories presented above are the “shadow”.

After reading the book, diligent readers may ask themselves why there are some games where excellent Black players commit such a large number of errors, eventually spoiling the

final outcome of the battle. This is a very suitable question, therefore those games were included on purpose. These players got themselves caught by the time pressure and eventually became a sitting duck for the shadow's throwers.

What should we do in order to avoid this negative outcome?

Here are some good recommendations that in my opinion will be of great help:

1. Do not panic!

2. Breathe normally and just come to your senses; do not look surprised, but take some time to secure the best way of dealing with your own mental capacity needed for the rest of the game.

3. Do that even if it means throwing a couple of minutes through the window, and do not literally think about pure chess topics. Remember, the amount of time is not wasted, but rather the best way to avoid the shadow!

Finally, after recovering, try to stick to the Najdorf-like typical positions at all cost. No hybrid of the Dragon or Scheveningen-like variation would pay off, but it will only get your opponent closer to his goal.

4. Apply the Najdorf knowledge and plans you have used for ages, and let the true "substance" bring you the desired success.

In addition, how can we notice the difference between the substance and the shadow?

Is there a borderline between the two concepts that are strongly related to each other?

As the Sun rises above us in the sky, each substance has its own shadow and this is the symbol of knowledge from the ancient times.

If knowledge contains both the substance and the shadow, a top chess player must also have them, as he should be always able to recognise the imaginary border between the two concepts and apply the one which he thinks is appropriate for the given situation.

There are games in which both concepts should be used, as nowadays chess has become a very complex matter. One cannot be a complete player without having all the segments of a grown-up personality including different areas of preparation.

Lately there has been a race against time in which we can witness the chess prodigies achieving amazing results at a very young age. Some say it is just the "computer era" combined with numerous talents given by the traditional chess nations. As a matter of fact, the problem goes much deeper than that and it is related to preparation including a wide range of objectives to be mastered by the students. I think mostly of the Indian and the Chinese young players who seem to have understood the substance and shadow theory and who have applied it with much success.

I wish you good luck and much success in applying these amazing concepts you have just learned about!

20...♖c7! This is a usual move, but the one that gives Black a slight advantage. This kind of situation can have a great impact on every player, and the standard question is what to do in moments like this?! The answer is, however, not at all easy, and cannot be given on general grounds. It lies in the essence of every chess player's assessment, rather than in the capacity of calculation ten or more moves ahead. A forced line can easily finish in a dead end if we miss something, especially when short of time. In this position, a calm 20...♖c7 keeps the pressure and gives us many possibilities of converting the advantage, while the opponent must endure an awkward defence. Needless to say that every wrong step ends up in the instant defeat. 21.♖b3 ♖hc8 This rook has nothing to do on the h-file so it is transferred here to create new threats. 22.♖e1 ♖c2 23.♖xb7+ ♖8c7 24.♖b8!
